## Nitrides

|                                                                                                                                                                                                                          |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Preparation and Characterization of MM'Si<sub>4</sub>N<sub>6</sub>C Ceramics</b><br>D.P. Thompson and Y. Zhang                                                                                                        | 3  |
| <b>The Phase Evolution in the Si<sub>3</sub>N<sub>4</sub>-AlN System after High-Energy Mechanical Treatment of the Precursor Powder</b><br>M. Sopicka-Lizer, T. Pawlik, T. Włodek and M. Tańcula                         | 7  |
| <b>New Green Phosphor Ba<sub>3</sub>Si<sub>6</sub>O<sub>12</sub>N<sub>2</sub>:Eu for White LED: Crystal Structure and Optical Properties</b><br>M. Mikami, S. Shimooka, K. Uheda, H. Imura and N. Kijima                 | 11 |
| <b>Application of Nitride and Oxynitride Compounds to Various Phosphors for White LED</b><br>K. Uheda                                                                                                                    | 15 |
| <b>Fabrication of Electrically Conductive Si<sub>3</sub>N<sub>4</sub> Ceramics by Dispersion of Carbon Nanotubes</b><br>S. Yoshio, J. Tatami, T. Wakihara, K. Komeya and T. Meguro                                       | 19 |
| <b>Low Temperature Sintering of Si<sub>3</sub>N<sub>4</sub> Ceramics and its Applicability as an Inert Matrix of the Transuranium Elements for Transmutation of Minor Actinides</b><br>T. Yano, J. Yamane and K. Yoshida | 23 |
| <b>2.45 GHz Microwave Sintering of Silicon Nitride</b><br>S. Chockalingam, J.P. Kelly, V.R.W. Amarakoon and J.R. Varner                                                                                                  | 27 |
| <b>Sintering Shrinkage Behavior of Si<sub>3</sub>N<sub>4</sub> Ceramics Prepared by a Post-Reaction Sintering Technique</b><br>H. Yabuki, T. Wakihara, J. Tatami, K. Komeya, T. Meguro, H. Kita, N. Kondo and K. Hirao   | 31 |
| <b>Sintering Shrinkage Behavior and Mechanical Properties of HfO<sub>2</sub>-Added Si<sub>3</sub>N<sub>4</sub> Ceramics</b><br>D. Horikawa, J. Tatami, T. Wakihara, K. Komeya and T. Meguro                              | 35 |
| <b>Fabrication and Evaluation of AlN-SiC Solid Solutions with p-Type Electrical Conduction</b><br>R. Kobayashi, J. Tatami, T. Wakihara, K. Komeya, T. Meguro, R. Tu and T. Goto                                          | 39 |
| <b>Atomic Resolution and <i>In Situ</i> Characterization of Structural Ceramics</b><br>Y. Ikuhara                                                                                                                        | 43 |
| <b>Non-Oxide Ceramic Nanocomposites with Multifunctionality</b><br>T. Kusunose and T. Sekino                                                                                                                             | 45 |
| <b>Electrical Resistivity Control of Hot-Pressed Aluminum Nitride Ceramics</b><br>N. Yamada, J. Yoshikawa, Y. Katsuda and H. Sakai                                                                                       | 49 |
| <b>Fracture Resistance and Wear Properties of Silicon Nitride Ceramics</b><br>H. Miyazaki, H. Hyuga, Y. Yoshizawa, K. Hirao and T. Ohji                                                                                  | 53 |
| <b>Oxidation of Rare Earth Silicon Oxynitride J-Phases</b><br>J. Takahashi and T. Suehiro                                                                                                                                | 57 |
| <b>Effect of Second Phase After-Heat Treatment on the Thermal Conductivity of AlN Ceramics</b><br>H.K. Lee and D.K. Kim                                                                                                  | 61 |
| <b>Thermal Conductivity Measurement of the AlN Ceramics at the Grain Scale Using Thermoreflectance Technique</b><br>S.K. Lee, I. Yamada, S. Kume, H. Nakano and K. Watari                                                | 65 |
| <b>Viscosity Measurement of Molten RE-Mg-Si-O-N (RE=Y, Gd, Nd and La) Glasses</b><br>N. Saito, D. Nakata, S. Sukenaga and K. Nakashima                                                                                   | 69 |

|                                                                                                                                                   |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>First Principles Calculations of Advanced Nitrides, Oxides and Alloys</b><br>I. Tanaka, A. Kuwabara, K. Yuge, A. Seko, F. Oba and K. Matsunaga | 73 |
| <b>Advances in Computation of Temperature-Pressure Phase Diagrams of High-Pressure Nitrides</b><br>P. Kroll                                       | 77 |

## SiAlONs

|                                                                                                                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Luminescence Properties of <math>\alpha</math>-SiAlONs and Related Compounds</b><br>R.J. Xie, M. Mitomo and N. Hirosaki                                                                                                     | 83  |
| <b>Developments in SiAlON Glasses and their Derivatives: Effects of Chemistry on Properties</b><br>S. Hampshire and M.J. Pomeroy                                                                                               | 87  |
| <b>Controlled Crystallisation of a Y-Si-Al-O-N Glass Typical of Grain Boundary Glasses Formed in Silicon Nitride-Based Ceramics</b><br>M.J. Pomeroy and S. Hampshire                                                           | 91  |
| <b>Synthesis and Refinement of <math>\beta</math>-SiAlON by Nitriding and Post-Sintering of Si Mixture</b><br>Y.J. Park, E.A. Noh, J.H. Ahn and H.D. Kim                                                                       | 95  |
| <b>Interactions between AlN and SiAlON Ceramics</b><br>A. Kalemčas, N.C. Acikbas, F. Kara, H. Mandal, K. Krnel and T. Kosmač                                                                                                   | 97  |
| <b>Surface Structuring of <math>\alpha/\beta</math>-Sialon Ceramics by Plasma-Etching</b><br>M. Riva, R. Oberacker, M.J. Hoffmann and C. Ziebert                                                                               | 99  |
| <b>SiAlON B-Phase Glass-Ceramic Microstructures</b><br>L.K.L. Falk, Y. Menke and S. Hampshire                                                                                                                                  | 103 |
| <b>Development of <math>\alpha</math>-<math>\beta</math> SiAlON Ceramics from Different <math>\text{Si}_3\text{N}_4</math> Starting Powders</b><br>N.C. Acikbas, F. Kara and H. Mandal                                         | 107 |
| <b>Effects of Process on Optical Transmittance of Dy-<math>\alpha</math>-Sialon Sintered at Lower Temperatures</b><br>J.M. Xue, Q. Liu, M. Fang, L.L. Ma, T.P. Xiu and L.H. Gui                                                | 109 |
| <b>Mechanical Properties of <math>\alpha</math>- and <math>\beta</math>-SiAlON Composite Ceramics Using <math>\beta</math>-SiAlON Powder</b><br>K. Asakoshi, J. Tatami, K. Komeya, T. Meguro and M. Yokouchi                   | 111 |
| <b>Tribological Performance of Translucent Dy-<math>\alpha</math>-Sialon Ceramics</b><br>Q. Liu, L.H. Gui, J.H. Meng and Z.F. Li                                                                                               | 115 |
| <b>High-Temperature Compressive Deformation of SiAlON Polycrystals Prepared without Additives</b><br>K. Chihara, D. Hiratsuka, J. Tatami, F. Wakai and K. Komeya                                                               | 117 |
| <b>Dielectric Properties of <math>\beta</math>-SiAlON at High Temperature Using Perturbation Method</b><br>Y.H. Seong, H.N. Kim and D.K. Kim                                                                                   | 121 |
| <b>Dielectric Properties of SiAlON Ceramics</b><br>D.K. Kim, H.N. Kim, Y.H. Seong, S.S. Baek, E.S. Kang and Y.G. Baek                                                                                                          | 125 |
| <b>Subcritical Crack Growth of <math>\alpha/\beta</math>-Sialon Ceramics in Distilled Water</b><br>M. Riva, R. Oberacker, M.J. Hoffmann and T. Fett                                                                            | 129 |
| <b>Corrosion of <math>\beta</math>-SiAlON in Molten Aluminium, Cryolite and NaCl-KCl Mixture</b><br>T. Plachký, J. Křesťan, M. Korenko, Z. Lenčes and P. Šajgalík                                                              | 133 |
| <b>Preparation and Corrosion of Mullite Thin Film on <math>\beta</math>-SiAlON Ceramics</b><br>Y. Noritake, H. Kiyono and S. Shimada                                                                                           | 135 |
| <b>Thermal Conductivities of <math>\beta</math>-SiAlONs by Mechanically Activated Combustion Synthesis</b><br>R. Sivakumar, K. Aoyagi, T. Watanabe and T. Akiyama                                                              | 139 |
| <b>Synthesis and Characterization of <math>\beta</math>-SiAlON Phosphor Powder Prepared by Reduction Nitridation of a Zeolite</b><br>T. Wakihara, Y. Saito, J. Tatami, K. Komeya, T. Meguro, Y. Fukuda, N. Matsuda and H. Asai | 141 |

## Carbides

|                                                                                                                                                          |     |
