Arnold Savitskii

Brief Annotation

Preface to the English Edition

Preface to the Russian Edition

Introduction

Table of Contents

CHAPTER 1. SINTERING OF SINGLE PHASES

1.1. Mechanisms of Sintering	1
1.2. Factors Affecting Sintering	10

CHAPTER 2. PRINCIPAL AND RELATED PROBLEMS

2.1. Driving Forces for Sintering; Definition of the Term "Sintering"	19
2.2. Diffusion Interaction between Solid and Liquid Metals	26
2.3. Plastic Flow in the Diffusion Zone	38
2.4. Growth of Powder Compacts during Liquid-Phase Sintering	45
2.5. Dilatometry of Powder Compacts during Liquid-Phase Sintering	55
2.6. Formation of Liquid Phase in Systems with Intermetallic Compounds	58

CHAPTER 3. VOLUME CHANGES OF TWO-COMPONENT COMPACTS DURING SINTERING

3.1 Model of Two-Component Powder Compact Being Sintered in the Solid State	63
3.2. Volume Changes of Ti-Ni Powder Compacts during Sintering	90
3.3. Model of Powder Compact Being Sintered in the Presence of a Liquid Phase	96
3.4. Amount of Growth of Powder Compacts during Liquid-Phase Sintering	98
3.5. Degree of Densification of Compacts during Liquid-Phase Sintering	105
3.6. Overall Magnitude of Compact Volume Changes during Liquid-Phase Sintering	110

CHAPTER 4. SINTERING OF SYSTEMS WITH CONSIDERABLE SOLUBILITY IN THE SOLID PHASE

4.1. Effect of Titanium Particle Size on Compact Growth in the Ti-Al System	117
4.2. Dilatometric and Structural Studies of Growth Process in the Ti-Al System	123
4.3. Volume Growth as a Method for Obtaining Highly Porous Ti-Al Alloys	131
4.4. Volume Changes Exhibited by Al-Zn Compacts	133
4.5. Liquid-Phase Sintering of Powder Compacts in the Al-Mg System	142

CHAPTER 5. SYSTEMS WITH CONSIDERABLE SOLUBILITY OF THE COMPONENTS IN THE SOLID AND LIQUID

5.1. Volume Changes of Compacts in the Cu-Sn System	151
5.2. Dilatometric and Structural Studies of Liquid-Phase Sintering in the Cu-Sn System	158
5.3. Volume Changes in Cu-Al Compacts	163
5.4. Aluminium Bronze, Parts made from which Change Little in Size during Sintering	171

CHAPTER 6. Al-Cu SYSTEM WITH HIGH SOLUBILITY IN THE LIQUID PHASE

6.1. Volume Changes of Al-Cu Compacts during Sintering	175
6.2. Effect of Porosity upon Volume Changes	180
6.3. Effect of Aluminium Particle Size	184
6.4. Alloy and Structure Formation	188
6.5. Sintering in the Presence of a Large Amount of Liquid Phase	197
6.6. Exothermal Sintering	200
6.7. Optimisation of Liquid-Phase Sintering Regimes	203
6.8. Possibility of Decreasing Compact Growth during Sintering	208

CHAPTER 7. SINTERING OF ALUMINIUM WITH TRANSITION METALS

7.1. Liquid-Phase Sintering of the Al-Cr System	211
7.2. Liquid-Phase Sintering of the Al-Ti System	219
7.3. Liquid-Phase Sintering of the Al-Ni System	225
7.4. Liquid-Phase Sintering of the Al-Fe System	234

CONCLUSION
