## Preface and Committees

## Chapter 1: Adaptive/Active Textiles

|                                                                                                                                                                                                                                       |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Smart Textiles: A Strategic Perspective of Textile Industry</b><br>L. Affatato and C. Carfagna                                                                                                                                     | 1  |
| <b>Development of Piezoresistive Fiber Sensors, Based on Carbon Black Filled Thermoplastic Elastomer Compounds, for Textile Application</b><br>F.J. Clemens, B. Koll, T. Graule, T. Watras, M. Binkowski, C. Mattmann and I. Silveira | 7  |
| <b>Integration of OLEDs in Textiles</b><br>S. Janietz, B. Gruber, S. Schattauer and K. Schulze                                                                                                                                        | 14 |
| <b>The Concept of Mood Changing Garments Made from Luminescent Woven Fabrics and Flexible Photovoltaics “MoodWear”</b><br>G.K. Stylios and D.Y. Yang                                                                                  | 22 |
| <b>Shape Memory Polymers in Textiles</b><br>J.L. Hu and J. Lu                                                                                                                                                                         | 30 |
| <b>Cosmeto-Textiles: State of the Art and Future Perspectives</b><br>P. Persico and C. Carfagna                                                                                                                                       | 39 |
| <b>Halochromic Textile Materials as Innovative pH-Sensors</b><br>L. Van der Schueren and K. de Clerck                                                                                                                                 | 47 |
| <b>Integration of Small Diameter Wire Form SMA for the Creation of Dynamic Shape Memory Textiles</b><br>P. Dyer                                                                                                                       | 53 |
| <b>Development of Paper Transistor Using Carbon-Nanotube-Composite Paper</b><br>Y. Kawamura, S. Hayashi, Y. Shinde and T. Oya                                                                                                         | 59 |

## Chapter 2: E-Textiles

|                                                                                                                                                                                                                                                          |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Textile Sensor Applications with Composite Monofilaments of Polymer / Carbon Nanotubes</b><br>A. Ferreira, F.B.N. Ferreira and M.C. Paiva                                                                                                             | 65 |
| <b>The Power Conversion Characteristics of Woven Organic Photovoltaic Wire Fabrics</b><br>A. Agrawal, Y.K. Kim, P.D. Calvert and M. Lee                                                                                                                  | 71 |
| <b>Feasibility of Printing Woven Humidity and Temperature Sensors for the Integration into Electronic Textiles</b><br>T. Kinkeldei, G. Mattana, D. Leuenberger, C. Ataman, F.M. Lopez, A.V. Quintero, D. Briand, G. Nisato, N.F. de Rooij and G. Tröster | 77 |
| <b>Essential Building Blocks of Fibrous Transistors, Part I: Gate Layer</b><br>L. Rambašek, B. Van Genabet, A. Schwarz, E. Bruneel, I. Van Driessche and L. Van Langenhove                                                                               | 83 |
| <b>Improvements of Smart Garment Electronic Contact System</b><br>I. Parkova, A. Vališevskis, I. Ziemele, U. Briedis and A. Vilumsone                                                                                                                    | 90 |

## Chapter 3: Manufacturing and Applications

|                                                                                                                                                                                |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Design and Optimization of an Injection-Moldable Force-Fit Interconnection Module for Smart Textile Applications</b><br>E.P. Simon, M. Fröhlich, C. Kallmayer and K.D. Lang | 96  |
| <b>Thigmo-Morphogenetic Fiber Composites Embedded with Shape Memory Alloys</b><br>M. Mingallon and S. Ramaswamy                                                                | 102 |
| <b>Research through Design: A Way to Drive Innovative Solutions in the Field of Smart Textiles</b><br>M. Toeters, M. ten Bhömer, E. Bottenberg, O. Tomico and G. Brinks        | 112 |
| <b>Washable Screen Printed Textile Antennas</b><br>I. Kazani, M.L. Scarpello, C. Hertleer, H. Rogier, G. de Mey, G. Guxho and L. Van Langenhove                                | 118 |
| <b>Two Novel Techniques of Fabric Sensing Using Carbon Nanofibers</b><br>A. Santos, P. Arquer, M. Prado, M.P. Merino and B. Ruiz                                               | 123 |

|                                                                                       |     |
|---------------------------------------------------------------------------------------|-----|
| <b>Smart Textiles with Biosensing Capabilities</b>                                    |     |
| S. Pasche, B. Schyrr, B. Wenger, E. Scolan, R. Ischer and G. Voirin                   | 129 |
| <b>Respiratory Volume Estimation by a Stretchable Textile Sensor</b>                  |     |
| Y. Enokibori, Y. Ito, K. Ikeda, A. Suzuki, Y. Shimakami, T. Kawabe and K. Mase        | 136 |
| <b>Classified Catalogue for Textile Based Sensors</b>                                 |     |
| P. Bosowski, C. Husemann, T. Quadflieg, S. Jockenhövel and T. Gries                   | 142 |
| <b>Durable Self-Healing Super-Liquid-Repellent Fabrics</b>                            |     |
| H.X. Wang, H. Zhou and T. Lin                                                         | 152 |
| <b>Prosys-Laser: Smart Laser Protective Textile Systems</b>                           |     |
| G. Dammacco, D. Wenzel and C. Hennigs                                                 | 156 |
| <b>Structural Conformability and Fluid Uptake Properties of Smart Wound Dressings</b> |     |
| M. Uzun, S. Anand and T. Shah                                                         | 163 |
