

Table of Contents

Preface

Table of Contents

1. Introduction. 1.1 Properties and Materials Performance of Magnesium. 1.2 Solid-State Synthesis	1
1.3 Magnesium-Based Alloys and Compounds	2
1.4 Theoretical Method for Solid-State Synthesis	5
2. Characterization, Measurement and Testing. 2.1 Sample Preparation.	7
2.2 Microstructure Characterization.	10
2.3 Thermal Analysis.	11
2.4 Thermoelectric Measurement.	12
2.5 Hydrogen Storage Testing. 2.6 Summary. References	14
3. Solid-State Synthesis. 3.1 Conventional Materials Processing.	17
3.2 Mechanically Induced Processes in BMA.	19
3.4 Two Mechanisms for Solid-State Reactivity.	23
3.5 Summary.	24
References.	25
4. Solid-State Synthesis of Magnesium-Based Hydrogen Storagealloys. 4.1 Magnesium-Based Hydrogen Storage Materials.	27
4.2 Material Processing Design. 4.3 Solid-State Synthesis of Single-Phase Mg₂Ni.	29
4.4 Ni-Enrichment in Mg₂Ni as a Non-Equilibrium Phase Material.	31
4.5 Solid-State Synthesis of Single-Phase Mg₂Co.	34
4.6 Discussion.	41
4.7 Summary.	44
References.	45
5. Solid-State Synthesis of Magnesium Binary TE-Compounds. 5.1 Properties and Performance of Mg₂X. 5.2 Revisiting the Materials Processing of Mg₂X.	47
5.3 Solid-State Synthesis of Mg₂Si.	49
5.4 Solid-State Synthesis of Mg₂Ge.	50
5.5 Solid-State Synthesis of Mg₂Sn.	51
5.6 Solid-State Synthesis of Mg₂Pb. 5.7 Thermoelectricity of Mg₂X.	52
5.8 Summary.	53
References.	54
6. Solid-State Synthesis of Solid-Solution Compounds. 6.1 Pseudo-Binary System and Solid-Solution Formation. 6.2 Revisiting Difficulties in Conventional Processing.	55
6.3 Solid-State Synthesis in the Mg-Si-Ge System.	56
6.4 Solid-State Synthesis in the Mg-Si-Sn System.	58
6.5 Thermoelectric Properties of Mg₂Si_{1-x}Gex.	60
6.6 Thermoelectric Properties of Mg₂Si_{1-y}Sn_y.	63
6.7 Discussion.	67
6.8 Summary. References.	72
7. Discussion. 7.1 Role of Intense Straining of the Materials.	75
7.2 Solid-State Reactivity.	76
7.3 On-Line Monitoring of Solid-State Reactivity.	82
7.4 Design of Materials Processing in the Solid.	83
7.5 Summary.	85
References. 8. Conclusion	86
References	88
