## Preface

## Chapter 1: Steel and Alloys

|                                                                                                                                                                                                      |    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Fracture Evaluation of Anisotropically Deformed Advanced High-Strength Sheet Steel through Stress-Based Forming Limit Curves and Fracture Loci</b><br>W. Polpruk, K. Chongbunwatana and S. Panich | 3  |
| <b>Scanning Strategy Effects on Melt Pool Dynamics and Surface Quality in Selective Laser Melting of Ti-6Al-4V</b><br>K. Khemabulkul, P. Ninpetch, P. Chuchuaiy and P. Kowitwarangkul                | 11 |
| <b>Study on Microstructure Evolution and Wear Resistance Properties of Laser Cladding Applied on R900A Rail Steel</b><br>Y. Pukkate, H. Koiprasert, P. Sheppard, E. Viyanit and P. Lertvijitpun      | 19 |
| <b>Study of Die Deformation Influence on Part Springback of an Automotive Chassis Component</b><br>P. Yindeepimol, S. Panich, S. Lolupiman and K. Chongbunwatana                                     | 27 |

## Chapter 2: Bio-Based Polymers

|                                                                                                                                                                                                                                       |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Hydrogel Synthesis from Durian Rind Cellulose with Microwave Grafting Method: A Study of the Effect of Cellulose Preparation Method and Microwave Irradiation Time</b><br>S. Distantina, A.R. Junita, D. Firstia and M. Kaavessina | 37 |
| <b>The Effect of Sugarcane Bagasse Cellulose-Acrylamide Ratio on Swelling Degree Properties of Sugarcane Bagasse Cellulose-Polyacrylamide-Based Bead Gel</b><br>S. Distantina, E.P. Novianty, R. Amalia and M. Kaavessina             | 47 |
| <b>The Effects of Polyvinyl Alcohol and Microcrystalline Bacterial Cellulose Concentration on The Characteristics of Gel Peel-Off Mask</b><br>M. Margono, A.A. Paramesti, S.Y. Santoso, W.A. Wibowo and A.D. Susanti                  | 59 |

## Chapter 3: Materials for Sensors and Photovoltaic Applications

|                                                                                                                                                                                 |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Optimization of an Iterative Approach for Precise Identification of Photovoltaic Cell Parameters</b><br>S. Sandoud, K. Alami, Y.M. Faysal, A. Fri and M. Salhi               | 71 |
| <b>Experimental Measurements and GEANT4 Simulation of NaI(Tl) Scintillator Detector</b><br>F.E. Arhouni, M. Hakkar, S. Ouakkas, M.A.S. Abdo and A. Boukhair                     | 83 |
| <b>Improvement of the Performance of Biosensors Based on Bloch Surface Waves in a Hybrid One-Dimensional Photonic Crystal</b><br>A. El Kouka, O. El Abouti and E.H. El Boudouti | 97 |

## Chapter 4: Catalysts and Catalytic Processes

|                                                                                                                                                                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Method for Regenerating Spent Catalyst Used to Produce Sulfuric Acid in the SO<sub>2</sub> to SO<sub>3</sub> Conversion Step</b><br>N. El Hasbaoui, A. Elhadrami and R. Brahmi                                                                                    | 113 |
| <b>Modification of Carbon Nitride Nanosheet Catalyst by Zirconium (Zr) as Doping: Potential Photocatalyst for Conversion of Glycerol to Hydrogen</b><br>C.P. Setiawan, A.W. Budiman, B.S.T. Sembodo, A. Nur, A. Jumari, E.R. Dyartanti, T. Paramitha and A. Purwanto | 123 |
