## Foreword

## I. Keynote Lectures

|                                                                                                                                                                                                                                                         |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>EBSD-Based Dislocation Microscopy</b><br>B.L. Adams, C.J. Gardner and D.T. Fullwood                                                                                                                                                                  | 3  |
| <b>Calculation Methods to Determine Crystallographic Elements: Interface Plane, Surfaces Plane and Twinning Elements, Based on Electron Diffraction Orientation Measurements by SEM and TEM</b><br>C. Esling, Y.D. Zhang, J. Muller, X. Zhao and L. Zuo | 11 |
| <b>Two- and Three-Dimensional EBSD Measurement of Dislocation Density in Deformed Structures</b><br>D.P. Field, C.C. Merriman and I.N. Mastorakos                                                                                                       | 17 |
| <b>Texture Control in Non-Oriented Electrical Steels by Severe Plastic Deformation</b><br>L.A.I. Kestens, R.H. Petrov, P. Gobernado and E. Leunis                                                                                                       | 23 |
| <b>Texture versus Residual Deformation Effects in Metal Materials: Principles of Experimental Approach and General Regularities</b><br>Y. Perlovich, M. Isaenkova and V. Fesenko                                                                        | 31 |
| <b>Application of Electron Backscatter Diffraction to Grain Boundaries</b><br>V. Randle                                                                                                                                                                 | 39 |
| <b>Texture Heterogeneity in ECAP Deformed Copper</b><br>W. Skrotzki, C. Tränkner, R. Chulist, B. Beausir, S. Suwas and L.S. Tóth                                                                                                                        | 47 |

## II. Contributions to Theory

|                                                                                                                                                                                                  |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Development of a 3D Crystal Plasticity Model that Tracks Dislocation Density Evolution</b><br>A. Alankar, I.N. Mastorakos and D.P. Field                                                      | 57 |
| <b>Texture Analysis with MTEX – Free and Open Source Software Toolbox</b><br>F. Bachmann, R. Hielscher and H. Schaeben                                                                           | 63 |
| <b>Structure Stability and Magnetic Properties of Ni<sub>2</sub>XGa (X = Mn, Fe, Co) Ferromagnetic Shape Memory Alloys by DFT Approach</b><br>J. Bai, J.M. Raulot, C. Esling, X. Zhao and L. Zuo | 69 |
| <b>Magnetic Quantitative Texture Analysis Using Isotropic Thermal Neutron Beams</b><br>D. Chateigner, B. Ouladdiaf and F. Léon                                                                   | 75 |
| <b>Influence of the Crystallographic and the Morphological Texture on the Elastic Properties of Fcc Crystal Aggregates</b><br>K. Jöchen, T. Böhlke and F. Fritzen                                | 83 |
| <b>On the Combination of Self-Consistent and Geometric Mean Elements for the Calculation of the Elastic Properties of Textured Multi-Phase Samples</b><br>S. Matthies                            | 87 |
| <b>Frequencies of Tilt and Twist Boundaries among Random Grain Boundaries</b><br>A. Morawiec                                                                                                     | 95 |

## III. Analysis of Global Texture

|                                                                                                                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Texture/Stress Characteristics of Microstructure Used in Interpreting Deformation Effects of Ti Subjected to ECAP Process</b><br>J.T. Bonarski, I.V. Alexandrov, V.D. Sitdikov, L. Tarkowski, J. Grzonka and M. Bieda-Niemiec | 103 |
| <b>Stress, Texture and Phase Transformation in Titanium Thin Films</b><br>J. Chakraborty, K. Kumar, R. Ranjan, S.G. Chowdhury and S.R. Singh                                                                                     | 109 |

|                                                                                                                                                                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Effect of Texture on Damping Behaviour in an AZ80 Alloy</b><br>W.M. Gan, E. Maawad, H. Chang, G.D. Fan, C. Randau, M.Y. Zheng, K. Wu and H.G. Brokmeier                                                                                                                       | 117 |
| <b>Texture Development in Zr-Based Alloys by High-Temperature Forging as Indicator of Interaction between Plastic Deformation and <math>\alpha \leftrightarrow \beta</math> Phase Transform Actions</b><br>M. Isaenkova, Y. Perlovich, V. Fesenko, S. Kropachev and O. Krymskaya | 123 |
| <b>Influence of the Cold Rolling Reduction on the Texture Development and r-Value Anisotropy in Ti-Stabilized 18% Cr Ferritic Stainless Steel</b><br>I. Jung, D. Chae and B.C. De Cooman                                                                                         | 129 |
| <b>Determination of Grain Size for Different Texture Components by Statistical Fluctuations of Intensity, Registered in the Course of Texture Measurement</b><br>O. Krymskaya, M. Isaenkova and Y. Perlovich                                                                     | 135 |
| <b>Texture Gradients in Shot Peened Ti-2.5Cu</b><br>E. Maawad, H.G. Brokmeier and L. Wagner                                                                                                                                                                                      | 141 |
| <b>Formation of Substructure and Texture in Dual-Phase Steels due to Thermal Treatment</b><br>M. Masimov and H. Klein                                                                                                                                                            | 147 |
| <b>Influence of Texture on Ridging and Formability of 16%Cr Ferritic Stainless Steel</b><br>J. Mola, D. Chae and B.C. De Cooman                                                                                                                                                  | 153 |
| <b>Effect of Texture on Tensile Properties of an ECAP-Processed MA2-1 Magnesium Alloy</b><br>V. Serebryany, T.M. Ivanova, T.I. Savyolova and S.V. Dobatkin                                                                                                                       | 159 |
| <b>Improved Plastic Anisotropy in Asymmetrically Rolled 6xxx Alloy</b><br>J.J. Sidor, R.H. Petrov and L.A.I. Kestens                                                                                                                                                             | 165 |
| <b>Plastic Anisotropy of Ultrafine Grained Al Alloy AA6016 Produced by Accumulative Roll Bonding</b><br>W. Skrotzki, J. Scharnweber, C.G. Oertel, H.W. Höppel, I. Topic, H.G. Brokmeier and J. Jaschinski                                                                        | 171 |
| <b>Determination of the Orientation Relations between the Low- and High-Temperature Phases of NiS</b><br>H. Sowa, H. Klein and L. Raue                                                                                                                                           | 177 |
| <b>Textures and Microstructures in Peridotites from the Finero Complex (Ivrea Zone, Alps) and their Influence on the Elastic Rock Properties</b><br>K. Ullemeyer, B. Leiss and M. Stipp                                                                                          | 183 |
| <b>Correlation between the Magnetic Properties and the Crystallographic Texture during the Processing of Non Oriented Electrical Steel</b><br>K. Verbeken, E. Gomes, J. Schneider and Y. Houbaert                                                                                | 189 |

#### IV. Analysis of Local Texture

|                                                                                                                                                                                                                                                |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Surface Texture Modification for Improved Roping Behaviour of Aluminium Alloy 6016</b><br>T.A. Bennett, R.H. Petrov and L.A.I. Kestens                                                                                                      | 197 |
| <b>A New Approach to Calculate the <math>\gamma</math> Orientation Maps in Steels</b><br>P. Blaineau, L. Germain, M. Humbert and N. Gey                                                                                                        | 203 |
| <b>Microstructure Investigations of the Phase Boundaries in the Bridgman TRIP Steel Crystal</b><br>D. Borisova, C. Schimpf, A. Jahn, V. Klemm, G. Schreiber, D. Šimek and D. Rafaja                                                            | 211 |
| <b>Elementary Facet Method for Grain Boundary Plane Determination by 3D EBSD</b><br>C.T. Chou and A. Gholinia                                                                                                                                  | 217 |
| <b>Nucleation and Growth of Surface Texture during <math>\alpha</math>-<math>\gamma</math>-<math>\alpha</math> Transformation in Ultra Low Carbon Steel Alloyed with Mn, Al and Si</b><br>J. Gautam, R.H. Petrov, E. Leunis and L.A.I. Kestens | 223 |
| <b>An Easy Approach to Increase the Precision of EBSD Analysis – Examples from a Sea Urchin Calcite Study</b><br>A. Goetz, E. Griesshaber and W.W. Schmahl                                                                                     | 229 |
| <b>Effect of Annealing on Microstructural Development and Grain Orientation in Electrodeposited Ni</b><br>U. Klement, L. Hollang, S.R. Dey, M. Battabyal, O.V. Mishin and W. Skrotzki                                                          | 235 |
| <b>Formation of Goss Texture in Grain Oriented Electrical Steel Sheets Produced by Commercial Compact Strip Processing</b><br>W. Mao, Y. Li, Z. An, G. Zhu and P. Yang                                                                         | 241 |

|                                                                                                                                                                                     |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Influence of MnS Particles inside Grains on the Boundary Migration before Secondary Recrystallization of Grain Oriented Electrical Steels</b><br>W. Mao, Y. Li, W. Guo and Z. An | 247 |
| <b>EBSD Study of Substructure and Texture Formation in Dual-Phase Steel Sheets for Semi-Finished Products</b><br>M. Masimov, N. Peranio, B. Springub, F. Roters and D. Raabe        | 251 |
| <b>Microstructural and Textural Aspects of Shear Banding in Plane Strain Deformed Fcc Metals</b><br>H. Paul                                                                         | 257 |
| <b>Effect of Strain Path on Microstructure and Texture Development in ECAP Processed AA3104 Alloy</b><br>H. Paul, T. Baudin, A. Tarasek and M. Miszczyk                             | 265 |
| <b>Microstructure Investigation of the PVD Thin Films of TRIP Steels</b><br>A. Poklad, V. Klemm, G. Schreiber, C. Wüstefeld and D. Rafaja                                           | 273 |
| <b>Location Depending Textures of the Human Dental Enamel</b><br>L. Raue and H. Klein                                                                                               | 281 |
| <b>The Exoskeleton of the American Lobster – From Texture to Anisotropic Properties</b><br>L. Raue, H. Klein and D. Raabe                                                           | 287 |
| <b>High-Speed Orientation Microscopy with Offline Solving Sequences of EBSD Patterns</b><br>R.A. Schwarzer and J. Hjelen                                                            | 295 |
| <b>Texture Formation during Hot-Deformation of High-Nb Containing <math>\gamma</math>-TiAl Based Alloys</b><br>A. Stark, F.P. Schimansky and H. Clemens                             | 301 |
| <b>Solder Joint Reliability in Automotive Applications: New Assessment Criteria through the Use of EBSD</b><br>A. Steller, U. Pape and L. Blair                                     | 307 |
| <b>Grain Structure Formation Ahead of Tool during Friction Stir Welding of AZ31 Magnesium Alloy</b><br>U. Suhuddin, S. Mironov, H. Takahashi, Y.S. Sato, H. Kokawa and C.W. Lee     | 313 |
| <b>Microstructural Characterization of Friction Welded TiAl-Ti6Al4V Hybrid Joints</b><br>V. Ventzke, H.G. Brokmeier, P. Merhof and M. Koçak                                         | 319 |
