## Preface

## Chapter 1: Geochemistry and Green Synthesis

|                                                                                                                                                                      |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Geochemistry Study for Maturity Indeks of Duri and Minas Crude Oil, Riau</b><br>E.M. Tamboesai                                                                    | 3  |
| <b>Starch/Polyvinyl Alcohol/Eggshell (Starch/PVA/EG) Blend Membranes with Turmeric Extract as a pH Responsive Sheets</b><br>I. Syahbanu, S. Qomariah and I. Utami    | 9  |
| <b><i>Lansium domesticum</i> Correa Extract as an Environmentally Friendly Larvacidal Activity and Identification</b><br>D. Deliza, S. Safni, R. Zein and R.A. Putri | 21 |

## Chapter 2: Pollutants Removal

|                                                                                                                                                                                                                                                                           |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Fabrication, Validation Methods and Interference Test of Beads for Detection Colorimetric of Fe(II)</b><br>N.C.A. Susanto                                                                                                                                              | 33 |
| <b>Lead Removal Using Biosorbent from <i>Sulcospira testudinaria</i> Shells</b><br>W. Utami, I. Noviarni, F. Rizal and N.R. Primarani                                                                                                                                     | 41 |
| <b>The Quality of Coconut Shell Charcoal is Activated by Variations in Concentration of NaOH Solution and Variations in Temperature to Decrease Chromium (VI) Ion Levels</b><br>A.H. Mukaromah, F.A. Wardoyo, N. Rahmani, N.A. Rachmania, A.Q.N. Hikmah and S.A. Khasanah | 49 |
| <b>The Influence of Potential on the Performance of Aluminum-Aluminum (Al-Al) Electrodes Based on Microplastic Removal Efficiency and Turbidity Level</b><br>A.I. Ramadani, Q. Fardiyah and B. Rumhayati                                                                  | 61 |
| <b>Detection and Characterization of Microplastics in Soil and Dust from Urban Road Surface</b><br>S. Ningsih, S.I. Lestari, K.D. Lestari, L.G. Marni, S. Suhendra and A.Q. Manurung                                                                                      | 71 |

## Chapter 3: Materials for Biomedical Applications

|                                                                                                                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Mechanical and Antibacterial Property Improvement of Mineral Trioxide Aggregate by Adding CuO Nanoparticles</b><br>S. Vanisa, S. Wulandari, B. Rusdiarso and N. Nuryono                                                                | 81  |
| <b>Green Synthesis of Ag/Carrageenan Nanoparticles Using Avocado Leaf Bioreductor (<i>Persea americana</i> Mill.) for Colorimetric Detection of Nitrite</b><br>I.L. Tarigan, S. Kasandera, N. Nelson, R.D. Puspitasari and N.C.A. Susanto | 93  |
| <b>Synthesis, Characterization, and Antibacterial Activity of Cinnamylideneacetophenone Compound from Cinnamaldehyde and 2-acetonaphthone</b><br>A. Balkis, D. Fitria and R.D. Putri                                                      | 107 |

## Chapter 4: Food Chemistry and Biotechnologies

|                                                                                                                                                                                                                                           |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>UV-Vis Spectrophotometer Analysis for Caffeine Level Determination of Arabica, Liberica, and Robusta Coffee in Jambi Province, Indonesia</b><br>S. Samsidar, H. Heriyanti, R. Rahmi, J. Pebralia, I. Amri, D. Ayundari and S. Sutrisno | 119 |
| <b>Panelists Acceptance of Ambon Banana Jam (<i>Musa paradisiaca</i>) and Ambon Banana Peels with the Addition of Blueberries (<i>Vaccinium sect. Cyanococcus</i>)</b><br>M. Angeline and E. Rukmini                                      | 127 |

## **Chapter 5: Modern Approaches to Chemical Education**

### **Implementation of Problem-Based Learning Modules Integrated Ethnoscience to Improve Science Literacy in Redox Material**

R.N. Kholifah, I.K. Yulina and T.A. Gusman

139

### **Simulation of Chemical Oxygen Demand Using Virtual Reality Technology**

D.R. Zuchrillah, S. Altway, H. Fabroyir, S. Arifiani, R.R. Hariadi, S. Soeprijanto, A.S. Beki, S.D. Rahayu and N. Nabilah

147

### **Chemistry Teacher Responses to Digital Laboratory: Challenges and Opportunities to Create Chemistry Laboratory Information System in High School**

N. Rahmah, U. Cahyana and I. Hanafi

157
