

Table of Contents

Preface

Table of Contents

1. Introduction

| | |
|--|---|
| 1.1. Different Types of TSDR Industrial Routes | 2 |
| 1.2. Economical and Ecological Benefits | 5 |
| 1.3. Metallurgical Differences between Conventional Rolling and TSDR | 6 |
| 1.4 Scope | 8 |

2. Strength and Toughness: Relationships with Microstructure

| | |
|--|----|
| 2.1. Introduction | 10 |
| 2.2. Strength (in Low Carbon Steels) | 12 |
| 2.3. Toughness | 16 |
| 2.4. Microstructural Homogeneity and Toughness (in the Ductile-Brittle Regime) | 18 |

3. Microstructural Control during and after Hot Rolling

| | |
|---|----|
| 3.1. Microstructural Changes during Hot Working | 30 |
| 3.2. Conventional Controlled Rolling | 48 |
| 3.3. Recrystallisation Controlled Rolling. Effect of Titanium | 61 |
| 3.4. Mean Flow Stress | 63 |
| 3.5. Phase Transformation during Cooling. Precipitation Hardening | 65 |

4. TSDR: Continuous Casting and Tunnel Furnace

| | |
|-------------------------|----|
| 4.1. Continuous Casting | 77 |
| 4.2. Tunnel Furnace | 89 |

5. TSDR: Rolling of Plain Carbon and Microalloyed Steels

| | |
|--|-----|
| 5.1. As-Cast Austenite Refinement | 97 |
| 5.2. Austenite Conditioning | 112 |
| 5.3. Processing Maps | 115 |
| 5.4. Optimisation of Rolling Schedules | 121 |
| 5.5. Phase Transformation | 125 |

6. Industrial Applications

| | |
|---------------------------------|-----|
| 6.1. Structural and HSLA Steels | 127 |
| 6.2. Development of API Grades | 128 |
| 6.3. Dual Phase Steels | 129 |
| 6.4. Concluding Remarks | 130 |

7. References
