

Table of Contents

Preface

Properties of Borided Cemented Carbides with Various Binders V. Průcha and D. Bricin	1
Choosing a Suitable Heat Treatment Regime for Stress-Relief and Microstructure	
Stabilization of Ti6Al4V Alloy 3D-printed by SLM Method M. Roudnická, E.A. Tarquino and D. Vojtech	11
Formation of Microstructure during Sub-Zero Treatments of Chromium and Chromium-Vanadium Ledeburitic Steels P. Jurčí	
	19
Sintering Problems during Preparation of Ti-Al-Si Alloys A. Knaislová, P. Novák and F. Prusa	37
Fe-Me-B Diffusion Layers for Surface Modification of Carbon Steels U. Mishigdorzhbyn, Z. Samaev, V. Mosorov and N. Ulakhanov	
	47
Fe-Al-Si Alloys for Applications in Internal Combustion Engines P. Novák, L. Rieszová, K. Nová and F. Prusa	
	57
Heat Treatment of High-Strength 3D-Printed Maraging Steel A. Strakosova, D. Vojtech and D. Dvorský	
	67
Properties of Cryogenic Treated Cemented Carbides (WC-Co) V. Průcha, D. Bricin, A. Kříž and Z. Jansa	
	75
Advantages and Properties of Laser-Hardened Surfaces S. Němeček	
	91
The Failure Degradation of Recycled Aluminium Alloys with High Content of β-Al₅FeSi Intermetallic Phases D. Medvecká, L. Kuchariková and M. Uhríčík	
	97
Microstructural Characterization of Ledeburitic Tool Steel after Sub-Zero Treatment and Tempering J. Ptačinová, J. Ďurica, M. Pašák, M. Kusy and P. Jurčí	
	103
