## Preface

## Chapter 1: Design and Researches in Area of Vehicle and General Mechanical Engineering

|                                                                                                                                                                    |    |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Design and Motion Simulation Analysis on Automobile Constant Velocity Universal Joints Driving Shaft</b>                                                        |    |
| F.L. Huang, L.J. Wang, Y.Q. Lin and Y. Zhao                                                                                                                        | 3  |
| <b>Effect of Boron-Nitrogen Containing Modified Soybean Oil Lubricating Additive on Friction and Wear Behavior of Steel-Steel and Steel-Aluminum Alloy Systems</b> |    |
| J.H. Fang, B.S. Chen, J. Wang and J. Wu                                                                                                                            | 8  |
| <b>Main Drive Vehicle of Two-Stage Driving Axle Design</b>                                                                                                         |    |
| H. Hu and Y.M. Yan                                                                                                                                                 | 12 |
| <b>Light Bus Drive Axle Design</b>                                                                                                                                 |    |
| H. Hu and Y.M. Yan                                                                                                                                                 | 17 |
| <b>Research Status and Prospect on Dynamics of Tank Automotive</b>                                                                                                 |    |
| S. Li, L.M. Song, X.J. Liu, Y.Y. Sun and X.L. Liu                                                                                                                  | 23 |
| <b>The Optimization for Aircraft Carrier Main Dimensions</b>                                                                                                       |    |
| Y.J. Wang, S. Huang, X.Y. Fang and G. Wang                                                                                                                         | 27 |
| <b>Performance Analysis of the New Helicopter-Lift Device</b>                                                                                                      |    |
| Y.M. Yang, Q.Y. Yang, J.B. Yao and Y.K. Li                                                                                                                         | 31 |
| <b>The Calculation Model and Correction Method of Identifying Deflexion of Oil Tank</b>                                                                            |    |
| D.B. Liu and W.B. Liu                                                                                                                                              | 35 |
| <b>Structural Analysis and Optimization Design of Motor Hanging Seat Structural Based on Pro/ENGINEER</b>                                                          |    |
| S.X. Gao, S.G. Zhao and L.F. Zhao                                                                                                                                  | 39 |
| <b>Influence for Brake Torque of Hydraulic Retarder with Shape of Circulation Circle</b>                                                                           |    |
| Y.X. Chu and J.H. Lv                                                                                                                                               | 43 |
| <b>TH6213 CNC Boring and Milling Machine Spindle System Thermal Equilibrium Analysis</b>                                                                           |    |
| H.J. Liu, Z.L. Chen and Y.X. Xu                                                                                                                                    | 47 |
| <b>Prediction on Vehicle Crash Acceleration Based on Circle of Constant Acceleration Method</b>                                                                    |    |
| Z.X. Liu, Y. Zhang and M.J. Wei                                                                                                                                    | 51 |
| <b>Analysis of Kinematics and Throughput of the Shotcrete Machine</b>                                                                                              |    |
| K.L. Feng, G. Zhang, F. Wang and B. Wang                                                                                                                           | 55 |
| <b>Force Analysis of Petticoat Valve of Shotcrete Machine Based on Fluent</b>                                                                                      |    |
| K.L. Feng, F. Wang, G. Zhang and J. Li                                                                                                                             | 60 |
| <b>The Vibration Characteristics Analysis of Miter Gate Based on ANSYS Workbench and Vibration Test</b>                                                            |    |
| X.Z. Zhao, R.F. Wang, J. Wang and M.Y. Zhao                                                                                                                        | 64 |
| <b>Comparative Study on External Flow Simulation of Passenger Car with Complex Underbody and Flat Underbody</b>                                                    |    |
| X. Yan, X. Qiao, Z.M. Zhao, J. Ye, L. Liao, X.J. Hu and J.Y. Wang                                                                                                  | 69 |
| <b>Acoustic Parts in Vehicle Sound Transmission Loss Test Method Research</b>                                                                                      |    |
| X.F. Wang and J. Shi                                                                                                                                               | 73 |
| <b>The Powertrain in Vehicle Sound Power Test Method Research</b>                                                                                                  |    |
| X.F. Wang and J. Shi                                                                                                                                               | 77 |
| <b>Modeling and Analysis of High-Speed Journal Bearing Based on Thermal Hydrodynamic Lubrication Theory</b>                                                        |    |
| S.S. Li, Y.X. Lu, M.L. Dong, J. Shao and F. Yu                                                                                                                     | 82 |
| <b>Parametric Design of Grid Plate Type Peanut Picking Machine</b>                                                                                                 |    |
| J.M. Hou, D.X. Yang, Y.T. Qu and L.X. Gao                                                                                                                          | 87 |
| <b>Finite Element Analysis of Model SZX20×2 Low Temperature Twin-Screw Oil Press</b>                                                                               |    |
| J.J. Wang and Y.L. Zhang                                                                                                                                           | 91 |

|                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Structural Finite Element Analysis on Side Wall Pouring Formwork Trolley for Subway Station</b>                               |     |
| Y.F. Ma, Z.T. He and Q. Zhao                                                                                                     | 95  |
| <b>Influence and Analysis of Temperature Rise to Principal Spindle's Rotating Error Test</b>                                     |     |
| K. Liu, J.F. Lin, Y.W. Wang and T.J. Zhu                                                                                         | 101 |
| <b>Modal Analysis of Linear Guide Way Junction Surface</b>                                                                       |     |
| S.L. Ren, T.Y. Cheng and Y. Dai                                                                                                  | 105 |
| <b>Analysis on Tow-Phase Flow of WJ-4FB Explosion-Proof Scraper Waste Gas Treatment Tank Based on CFD</b>                        |     |
| W. Zhang, W.M. Zhang and M.M. Guo                                                                                                | 109 |
| <b>The Application of the Polynomial Regression Method in High-Speed Train Seat's Curve Design</b>                               |     |
| Y.P. Guo, G.Q. Song and F.Y. Song                                                                                                | 113 |
| <b>Study on the Utilization of Regenerative Braking Energy for High-Speed Railways</b>                                           |     |
| G.Y. Zhang and Q.Z. Li                                                                                                           | 117 |
| <b>Design of a New Unlock Mechanism for Fuel Tank Catapult</b>                                                                   |     |
| Q.J. Wu, H.Q. Tang and Y.Y. Yuan                                                                                                 | 124 |
| <b>Frequency Reliability Analysis of Diamond Circular Saw Blade</b>                                                              |     |
| Z. Yuan, Z.F. Qin, R.Y. Cao and L.L. Song                                                                                        | 128 |
| <b>The Parametric Design for Hydraulic Cylinder Based on SolidWorks</b>                                                          |     |
| H.Y. Wang, G.H. Han, X.M. Jiang and H. Wang                                                                                      | 132 |
| <b>Statics and Modal Analysis for Large Vibrating Screen</b>                                                                     |     |
| W.F. He and A.M. Xian                                                                                                            | 136 |
| <b>Analysis and Simulation on Automobile Airbag Compression Test</b>                                                             |     |
| Y. Gao and X.H. Zeng                                                                                                             | 140 |
| <b>High-Voltage Converter Technology Applied in Coal Mining Ventilator</b>                                                       |     |
| H.Q. Wang and M.Z. Zhang                                                                                                         | 144 |
